Portfolio

Experience

- **Associate Systems Engineer** *Aug 2024 - Present*
  Tata Consultancy Services
  – Collaborated with 2 internal QA teams and the AI research division to test Microsoft Copilot's integration with MS PowerPoint, enhancing AI-driven productivity features.
  – Constructed and executed 50+ structured test cases to evaluate Copilot's real-time slide generation and contextual recommendations, reducing feature-related bugs by 30% during pilot testing.
  – Documented and reported 15+ UX and performance issues, including latency delays and semantic mismatches, directly influencing major improvements in Copilot's AI model behavior.
- **Full Stack Web Developer Intern** *Nov 2023 - June 2024*
  Trusty Money
  – Developed key application features using the MERN stack, including OTP services, email services, and a transaction dashboard with an admin panel.
  – Improved backend API response times and frontend rendering, enhancing website performance by 40% through code refactoring and caching strategies.
  – Automated build processes by implementing CI/CD pipelines using Docker and Azure Pipelines, reducing manual deployment time by 80% and accelerating feature rollouts.
  – Wrote unit and integration tests using Jest and React Testing Library, improving code coverage and reducing bugs by 35%.

Education

- **Bachelor of Technology in Electronics and Communications Engineering** *2020-2024*
  Indian Institute of Information Technology Guwahati CGPA: 7.7

Projects

- **AI-Powered Conversational Chatbot** ***Demo***
  Full-stack LLM application with conversational memory
  – Built a full-stack conversational AI application integrating the Gemini 1.5 Flash LLM through the Google Generative AI API for context-aware text generation.
  – Implemented conversational memory by persisting user and assistant messages in MongoDB and supplying prior chat context to the LLM for multi-turn interactions.
  – Developed REST APIs with Node.js and Express.js for chat generation, chat history retrieval, and conversation management, with JWT-based user authentication.
- **Customer Churn Prediction & Analysis**
  Machine learning project for telecom customer churn prediction
  – Performed data cleaning and exploratory data analysis (EDA) on 7,000+ telecom customer records using Python, Pandas, NumPy, Matplotlib, and Seaborn to identify key churn patterns.
  – Preprocessed categorical and numerical features using Label Encoding and Standard Scaling and prepared the dataset for machine learning classification.
  – Built and compared KNN, Decision Tree, Random Forest, AdaBoost, and Gradient Boosting classifiers for customer churn prediction using Scikit-learn.
  – Evaluated model performance using accuracy, precision, recall, F1-score, confusion matrix, and ROC-AUC to identify the most effective classification model.

Technical Skills

Languages: C/C++, Python, JavaScript, SQL
Data Science/ML: NumPy, Pandas, Matplotlib, Seaborn, Plotly, Scikit-learn, Regression, KNN, Decision Trees, Random Forest, AdaBoost, Gradient Boosting
Web/Backend: ReactJS, NodeJS, ExpressJS, REST APIs
Generative AI: Google Gemini API, Microsoft Copilot, LLM Integration, Conversational AI, Prompt Engineering
Cloud/Databases: Azure, Azure DevOps, Docker, Kubernetes, MongoDB, MySQL

Certifications

- **Introduction to Containers w/ Docker, Kubernetes & OpenShift** - Authorized by IBM
